

Help ease one of the frustrations in the water industry

On census night we need you to use one of these 28 occupations for the Water Industry

Currently the water industry is significantly under counted due to the lack of water specific occupational codes recognised by the ABS.

The Australian and New Zealand Standard Classification of Occupations (ANZSCO), is a classification system that provides for the standardised collection, analysis, and dissemination of occupation data.

Why are codes important?

- To define the size & scope of the water industry
- Government funding opportunities
- Training & workforce development needs
- Statistical analysis (ABS)
- Licensing & certification

Occupation	Usual Qualification
Source (catchment & bulkwater)
